

GRDC Soilborne Pathogens Workshop

DOES YOUR Paddock LOOK LIKE THIS?

OR YOUR ROOTS LIKE THIS?

9 September 2021

Soilborne diseases and nematode pests constrain crops by influencing the capacity of roots to acquire water and nutrients. Growers and advisors are invited to attend this workshop to learn what to look for in your paddock, how to examine plant roots, diagnostic testing, and practical management techniques.

Participants please bring plant samples to the workshop, so you'll walk away knowing which

Workshop and demonstration site is hosted by Stirlings to Coast and invested in by the GRDC. Spaces will be capped at 20 people so RSVP early to avoid disappointment.

soilborne diseases may be causing your crop to underperform.

Take the opportunity to engage with DPIRD pathologists Sarah Collins, Daniel Huberli and Domine Wright; and learn how to manage soilborne pathogens at this practical hands on workshop.
